

Pulp & Paper Sourcing Sustainability – July 2024 Update

Mars remains committed to helping to stop deforestation and forest degradation in our pulp and paper supply chain. We will work towards this by continuously aiming to:

1. Achieve 100% traceability of virgin pulp and paper-based packaging to at least country of harvest annually.
2. Source 100% of fiber-based packaging from certified, verified or recycled sources annually.
3. Ensure virgin pulp and paper that we source from origins assessed as high-deforestation risk are certified by the [Forest Stewardship Council \(FSC\)](#).

Please see our 2023 supply chain update for more information on our progress:

Total Volume (Metric Tonnes (Mt)): 502,265

Percent of Fiber-Based Packaging from Certified, Verified or Recycled Sources: 95%

Percent Recycled Fiber: 63%

Percent Virgin Fiber: 37%

- Percent of Virgin Fiber Traceable to at Least Country of Harvest: 90%
- Percent of Virgin Fiber that is Certified: 89%

Key Certification Progress Statistics (2023):

- Out of all virgin fiber sourced, 11% is from “High Risk” or unknown origins AND has not yet been purchased as FSC certified.
- The remaining 89% virgin fiber is certified, with 41% purchased with an FSC claim (at least FSC Mix) and 48% purchased with PEFC or SFI claim (at least 70% Forest Management)
